PACKAGING THAT PUTS THE PLANET FIRST

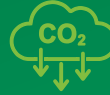

Packaging
Made From
Plants

Responsibly
Sourced &
Manufactured

Certified
Compostable

Emissions
Reduction

Fast
Delivery

We create compostable packaging solutions for a circular economy where there is no waste. It starts with responsibly sourced materials, continues with environmentally certified manufacturing processes, and ends with disposal options that see resources reused or regenerated.

GO CIRCULAR

The traditional economic model is linear and can be simplified as having three basic stages: take, make and waste. BioPak has a commitment to disrupt this outdated model and to invest in a waste-free future – where innovative design and corporate responsibility intersect to create a circular, and regenerative economy.

Plant-Based Raw Materials

Our plant-based products are designed to minimise the impact on our environment at each stage of their life cycle, by using materials that are both sustainably sourced and rapidly renewable. The footprint of these renewable materials is significantly smaller than that of traditional plastics derived from fossil resources – Ingeo™ bioplastic, for instance, has a footprint up to 80% lower.

Sugarcane Fibre

Sustainably Sourced Paper

PLA Bioplastic

The End is Just the Beginning

Our products are designed to turn into compost – a new, valuable and locally produced resource at the end of their useful life. A thin layer of compost can mitigate climate change by improving the soil's ability to stabilise carbon and by increasing plant growth, which pulls more carbon dioxide out of the atmosphere.

Responsible Supply Chain

BioPak products hold many certifications to ensure our products are made with people and the planet in mind first. Our certifications hold our manufacturers accountable and set a standard in the packaging industry to make sure people are treated and paid fairly, our products are safe for consumers and our planet is protected and even benefits from our product stewardship activities.

Compostable Solutions

Did you know that the methane gas emitted from food in landfill is the third largest contributor to climate change?

Compostable packaging can help divert food scraps from landfill, avoiding harmful greenhouse gas emissions. Both food waste and compostable packaging can go in the same bin to be turned into nutrient-rich compost. There are a growing number of residential compost collections across Australia and New Zealand.

Find your local composter at Compost Connect today at compostconnect.org

Emissions Reduction

When our products end up in landfill, the carbon emissions they release represent 60% of their total lifecycle footprint. We are working on an emissions reduction roadmap which will see us invest in local projects that help divert packaging and food waste from landfills. We are also working to reduce our operations and supply chain emissions.

GIVE BACK FUND

\$3,990,804

As a profit for purpose business, we are driven to preserve and protect the environment and give back to the communities we live in. We started the BioPak Give Back Fund in 2012 and since have dedicated our time, energy and a total of \$3,990,804

Emissions Reduction

When our products end up in landfill, the carbon emissions they release represent 60% of their total lifecycle footprint. We are working on an emissions reduction roadmap which will see us invest in local projects that help divert packaging and food waste from landfills. We are also working to reduce our operations and supply chain emissions.

22,720,685 Tonnes of Plastic Avoided

At BioPak, we champion the transition to a circular economy with industry-leading products, made from plants. Our product range is made from renewable materials and certified compostable. Since 2010, we avoided 22,720,685 tonnes of plastic together with our customers.

112,436 Trees Planted

We are passionate about forest protection and restoration, and donate 1% of profits as part of this fund to support Rainforest Rescue in Australia and Green Fleet in New Zealand. Since 2010, we've planted 112,436 trees.

OzHarvest Partnership

OzHarvest is Australia's leading food rescue organisation, collecting quality excess food from commercial outlets and delivering it directly to more than 1,300 charities supporting people in need across the country. Our partnership with OzHarvest will enable them to deliver at least 200,000 free meals for those who need it the most. In addition, our staff and customers are welcome to volunteer their time to help make and package up food for delivery.

Product Stewardship

BioPak's new product stewardship scheme for organic waste and compostable packaging, Compost Connect, was awarded a national grant to reduce waste going to landfills, lift recycling rates and help foodservice businesses and consumers make a practical, positive difference for the environment.

Custom moulded sugarcane products – MOQ applies*

PAPER CUPS, LIDS & ACCESSORIES

Hot Paper Cups & Lids

Hot cups made with paper from managed plantations and lined with Ingeo™ – an industrially compostable plant-based lining.

BioCup Accessories

Find home compostable lids, recycled paper cup trays, FSC™ cup sleeves and compostable stirrers and teaspoons in our ranges.

HOME COMPOSTABLE SOLUTION

This icon is the independent and internationally recognised Australian home compost certification. Go to the biopastics.org.au to verify all certifications.

The Future of Cups

BioPak is more than just a compostable packaging company. We envision a future in which materials are made from sustainably sourced, rapidly renewable biological resources, and recycled back into the soil.

Experience the revolution of paper cups with Aqueous – the unique water-based dispersion coating certified home compostable to both Australian (AS5810) standards and European (TNF T51-800). These revolutionary cups are food-safe and odourless.

Aqueous technology uses a unique water-based dispersion coating instead of plastic or bioplastic. The coating is applied like paint, allowing it to be absorbed into the paper fibres, reducing the amount of material needed – while still providing the same leak and grease-proof benefits as other coatings.

With our plant fibre lids, you can now offer your customers a fully home-compostable cup solution. Watch this space

as we upgrade all our existing BioCups ranges to feature the new Aqueous lining.

Aqueous currently represents the gold standard for lining solutions on the market, but our unwavering commitment to innovation means that we are already working on new and exciting developments to be released within the year. Stay tuned for more!

TAKEAWAY CONTAINERS

Clear Bowls & Lids

Clear bowls made from plant-based Ingeo™ bioplastic. Certified industrially compostable.

Paper Takeaways

Industrially compostable paper bowls, cups and containers made with sustainably sourced paper and lined with plant-based bioplastic.

Sugarcane Takeaways, Plates, Trays & Bowls

Made from plant fibre, a by-product remaining after the juice has been extracted from sugarcane refining (that would otherwise be burned).

Sushi Boxes & Lids

Sushi boxes have an Ingeo™ bioplastic lid with a plant fibre base.

BioBoard Corrugated Boxes & Trays

FSC™ certified paper board products perfect for hot food.

BioBoard Boxes & Wrap Wedges

FSC™ certified paper lunch boxes and wrap wedges. Perfect for the grab'n go market.

BioBoard Catering Trays Bases & Lids

Unlined FSC™ certified paper board trays and lids that are perfect for presenting and transporting catered food.

CUTLERY AND NAPKINS

Wooden Cutlery

FSC™ certified birchwood cutlery and wax-coated cutlery that is home compostable.

Plant Based Cutlery

Rapidly renewable plant-based cutlery made from bioplastic or plant fibre that is certified industrially or home compostable.

Napkins

Made from FSC™ certified paper with matching dispensers to reduce wastage.

KNOW YOUR BIOPAK PACKAGING SYMBOLS

Disposal

Industrially compostable

Home compostable

Compostable

These symbols identify packaging that is independently certified as either home or industrially compostable. Industrially compostable certified products will disintegrate within 84 days and biodegrade within 180 days in industrial composting conditions. Certified home compostable products will biodegrade within 365 days in home composting conditions. We list the certification standards and our unique certificate number.

Recyclable

This packaging can be recycled through kerbside recycling collection – just make sure it's rinsed clean and free from grease and oil.

Product Materials

Responsibly Sourced Paper and Wood

We only use raw materials from responsibly managed plantations, including FSC™ certified plantations, to ensure our forests are protected forever.

Bioplastic/ Polylactic Acid (PLA)

Our plant-based bioplastic packaging is either home or industrially compostable and has a lower carbon footprint than conventional plastic packaging. It is not recyclable with conventional non-compostable plastics.

Plant Fibre

Our plastic-free plant fibre packaging is made from reclaimed and rapidly renewable sugarcane pulp – a by-product remaining after the juice has been extracted from the sugarcane refining industry (that would otherwise be burned). Plant fibre packaging can be recycled in the cardboard stream if not contaminated with food.

Conventional Plastic

We're in the process of phasing out all non-compostable plastic items. This type of plastic is well-marked so you can identify whether they're kerbside recyclable – they are **not** compostable.

Product Features

Customisable

Our experienced design team is here to assist with custom branding or bespoke mould sugarcane fibre solutions.

Hot or Cold Use

Our hot food friendly packaging is grease-proof and sturdy, and will retain its structural integrity whilst holding hot food. Our clear bioplastic cups and bowls are cold use only.

Microwave & Oven Friendly

We have noted which packaging is microwave and/or oven safe. Our sugarcane takeaway range can go in the oven at temperatures of up to 220°C for a maximum duration of 20 minutes.

Freezer Friendly

This symbol means the packaging is freezer friendly, however the structural integrity will vary depending on the food contained when frozen and thawed. We can supply samples for you to conduct testing.
